

Air Sampling Kits

Single Pump Kit with intrinsically safe sidekick Pump

Ready To Go when You Are

SKC provides a range of ready made air sampling kits for the main applications of dust/particulate and gas/vapour sampling. If you are new to sampling, looking to update your equipment or simply too busy to find out what you need from our extensive range, SKC can help.

Call our technical support department, tell us what you need to do and our team of experts will recommend a kit to suit your requirements and get you started on a regular monitoring programme.

SKC Air Sampling Kits come with a choice of one or five pumps, and range from an upgradeable basic version, to a comprehensive particulate and vapour sampling system.

How do I buy the correct kit for me?

Buying a kit couldn't be simpler. Ask yourself some questions, note the relevant SKC codes and the choice is made.

1. What features do you require in your sampling pump?
2. What types of hazards will you be collecting now or in the future?

Choose an SKC kit, and take the guesswork out of buying.

What else do I need?

When you have chosen the kit, you'll need to add a calibration device. Kits don't include this because we want you to choose from the range of units based on the level of accuracy and price to suit your own needs.

You'll need media to sample onto. If you are unsure what media is required take a look at the SKC comprehensive air sampling guide.

Finally, if you are new to sampling, we'd recommend our help options for added confidence and to save money by getting it right first time.

We also offer training days, take a look at our one day 'Practical Course in Air Monitoring'. Visit our events page at www.skcltd.com for details. Or call us for the first Step by Step Guide in our series - 'Introduction to the Basics'. We can even email it to you **straightaway - free!**
