Support, Knowledge, Choice

Quality You Can Rely On

SKC manufactured the first commercial sorbent tube which was NIOSH approved, and the range of tubes continues to grow.

SKC tubes offer mesh size consistency and many tubes have a back up section which allows you to detect breakthrough.

Sorbent tubes are just one product in our range of validated quality products.

What does SKC Have to Offer?

SKC offers a wide range of sampling choices:

- * **Tubes and filters** designed to work with an air sampling pump
- * **Tedlar bags** to collect whole air samples
- * **Colour change tubes** – both active or passive to give near instant results
- * **Badges or strips** for passive use
- * **Portable monitors** for convenience in gas and dust monitoring

An extensive range of SKC tubes, filters and badges are in stock and available for immediate delivery. However, if you require something different, we will be happy to make or treat items to order.

Research continues as SKC offers products to the latest specifications meeting developing methodologies.

How Can I Get Advice?

If you need assistance before you make your selection, consult our sampling guides starting on page 103 of the new 25th Edition Catalogue, or see the sampling guides on this website or call 01258 480188.

We also offer a range of support services, for those new to air sampling, or to update your knowledge and skills - please see the training area of this website or contact SKC for details.

Is anybody there?

If you require help, or would like to ask a question, it is comforting to know that in these high technology times our advisors are 100% organic - available by telephone or email!
