Surface & Skin Indicators

Why worry about skin?

Many chemical hazards are now known to enter the body through skin adsorption and hence have been listed in health and safety publications.

EH 40 - the occupational exposure limits booklet from the Health & Safety Executive makes specific notations relating to skin exposure.

Emphasising Skin Management

More new skin notations were added to EH40, placing an emphasis on the importance of good skin management regimes in the workplace.

Aiming for prevention

Through a good skin management program and by ensuring tools or surfaces are not contaminated.

- * Lower the uptake of chemical hazards through skin absorption.
- * Prevent painful occupational dermatitis.

The Complete System

SKC offers a variety of skin and surface monitoring products and cleansing products to ensure you can implement a complete system of indication, identification and thorough decontamination.

Step by Step Guide to Dermal Exposure

The SKC Step by Step Guide series includes a dermal exposure guide. Part No. 224-G6
