

Don't forget... ...Practical training courses

SKC offers regularly held ONE day practical training courses in air monitoring.

The course is suitable for beginners through to those wanting a refresher.

It can be tailored and run in-house and is a mixture of theory and practical sessions.

The course includes:

- Introduction to air sampling methods
- Exposure limits – what they are and how to monitor for them
- Dust/gas/vapour sampling - how, when and why – the recognised methods
- Practical sampling exercises with equipment

For dates and more information, please contact SKC.

Twin Port Pocket Pump

210-1003MTX

Low Flow Air Sampling Pump
for Gas and Vapour Sampling

Pocket Pump & Twin Port Pocket Pump

The SKC Pocket Pump and Twin Port Pocket Pump are designed to fulfil the requirements of low flow sampling of gas and vapours. The pumps are slim line and compact. The Pocket Pump can be used for single tube and multi tube (with optional pressure controller) sampling. The Twin Port Pocket Pump is designed for grab sampling into sampling bags.

Both pumps are intrinsically safe with ATEX approvals.

Key Features:

- Very small and light weight
- Continuous display: volume flow time, battery status, temperature
- Auto shut down on flow fault
- Programmable via PC software or manually
- Easy to use 3 button key pad
- Programmable runtime and delayed start
- Interrupt 'hold' feature
- Ultra quiet operation
- Multi low flow sampling facility
- Continuous run capability using charger/ mains adapter
- Flow range of 20-225ml/min and the flow is compensated to $\pm 5\%$.
